

Fighting energy poverty – A Grafting Cities Workshop

From 15:00 – 17:00 on 19 October in Modena (IT)

Climate Alliance members adopted a resolution to fight energy poverty in the midst of the energy crisis in 2022. Therein, Climate Alliance municipalities demonstrate a long term commitment to support their citizens, eradicate energy poverty by 2050 and integrate social aspects in local energy and climate policy.

In this workshop, we build on that commitment, aiming to support local and regional authorities in understanding how to implement successful measures to mitigate energy poverty. The workshop explores the needs of municipalities when tackling energy poverty.

With inspiring cases and peer support, we will support participants in setting up and managing their measures by identifying and collaborating with stakeholders, measuring energy poverty, supporting structures for energy vulnerable households.

For the peer activity, participants will have the chance to collaborate on adjusting energy efficient renovation frameworks to encompass an energy poverty perspective and on setting up or support energy communities as part of the solutions for energy poor households.

AGENDA

Tackling energy poverty in a strategic way – Municipal experiences

Integrating energy poverty measures in a municipality's climate strategy
Successful strategies and instruments along with their impact on citizens

Municipalities' role in national energy poverty policies –Italia in Classe A |

Italy's national renovation campaign's energy poverty aspects
Edoardo Pandolfi, ENEA – the Italian Energy Agency

Program for the alleviating energy poverty in the city of Zagreb: Tackling energy poverty in a strategic way

Miljenka Kuhar, DOOR, Croatia

Supporting structures for hard-to-reach energy vulnerable households: The experience of The Citizen Action Lab in Città di Castello

Luca Secondi, Mayor and Benedetta Calagreti, Deputy Mayor for social services, Città di Castello / Climate Alliance Italy

How to set up and run an energy poverty office in a metropolitan area (draft)

Diana Paunova, SOFENA – Sofia Energy Agency, Bulgaria

Local barriers to and solutions towards a socially just transition: Interactive Peer Activity

- **Theme 1:** Socially just energy transition through increasing energy efficiency of buildings: renovation measures or newly built buildings with energy poor households
- **Theme 2:** Tackling energy poverty and socially just transition through energy provision: models on setting up energy communities with supporting mechanisms for energy poor households

Conclusions – Presentation of the peer activity's problems and solutions

*The Workshop is organised in the framework of the **Covenant of Mayors Europe**, in collaboration with the **EU Energy Poverty Advisory Hub**, the H2020 project **ENPOR** and the LIFE project **Beckon**.*
