

# Enhancing local resilience with digital tools

## Workshop E – Session agenda

Thursday, 10 October, 16:00 – 17:30  
Cascais Cultural Centre | EN

From improving participation and citizen engagement to evaluating if your policies and measures have impact, digital tools in the form of digital twins can inform municipalities and help them make better, more widely accepted decisions. In this workshop we learn first-hand how municipalities can use digital technologies to improve their policy and implementation work.

In the first part of the workshop, experienced peers will share their best practices when it comes to using digital tools for efficient water management as well as for fun and easy citizen engagement. In the second part of the workshop, participants will get the chance to openly discuss specific resiliency challenges while identifying the phases in which a digital tool can best support adaptation measures and generally how tools can be a part of the solution.

Take part and co-create on how digital tools can be part of municipal adaptation solutions!

### Agenda

16:00 – 16:10	<b>Welcome</b> Max Beijneveld, Policy & Project Coordinator, Climate Alliance
16:10 – 16:25	<b>GOOD PRACTICE: Assessing heat island effect and tree density with a Digital Twin in Sandyford, Dublin (IE)</b>
